SCHOOL BOARD

TO THE LONDONDERRY SCHOOL BOARD:

I take pleasure in presenting to you my tenth annual report of the conditions of the schools in Londonderry.

In accordance with your request the testing that has been done in the past year has been recorded so that it shows its relationships to standard norms as well as the achievement of other schools in this district.

A study of the tables of the fall and winter tests in fundamental subjects shows that sixteen grades have improved in arithmetic reasoning against three cases of retrogression. Seventeen different grades show improvement in drill in arithmetic against one case of loss. Map study improved in ten grades and lost ground in four grades. Geography improved in ten grades, lost ground in three grades, and stood still in three grades. English dictation improved in all but one grade. The vocabulary test given in the lower grades showed improvement in all schools. The results in the other subjects show a similar trend upward.

Four diagnostic tests in English have been given this year. These tests disclose certain definite fundamental mistakes in capitalization, punctuation, grammar and sentence structure of the English language. Combining the scores of the four tests, two of the five eighth grades appear to be above the median standard score. In three schools having seventh grades, two of them are ahead of the median standard score. In the five schools having sixth grades, three of them have scores above the median standard. In the three schools having fifth grades, one of them

is above the median standard score. The combined score of the several schools in the third and fourth grade is well above the median score. Certain schools appear to be stronger than others in respect to these tests. The needs of some of our grades for an improved instruction in English appears to be obvious. The general tests also disclose weaknesses in those schools maintaining a shortened time schedule.

In rural schools where each teacher has a number of grades there is an element of time that cannot be overlooked. Teachers who travel a considerable distance to a rural school should compensate for living out of the immediate vicinity of the school by arriving very early in the morning and leaving late at night. Otherwise much of the planning and structural work of the school room must be done during school time, thus interfering with lesson assignments, proper testing, and drilling in the fundamentals.

The test show conclusively the need of the application of the proper amount of time elements in teaching in the rural schools. I recommend that as soon as possible all schools be put on the regular schedule designated in the rules of the school board.

I also recommend that the time for instruction in English be increased and that teachers make a special study of these common weaknesses disclosed by the tests with the view to their elimination and the improvement of English diction.

The school nurse reports that annual physical examinations have been made. Many defects have been corrected and that many defects still need to be corrected. Parents should pay close attention to the cards which are sent home indicating defects or diseases of the eyes, ears, nose, throat, glands, and com-

municable diseases, and have them corrected immediately. In simple cases parents are expected to attend to the corrections themselves without a visit from the nurse. Such visits entail the expense of transportation. If parents care for the minor ailments much money will be saved the school district and the school nurse may attend to cases of major importance.

Clinics have been held at the Elliott Hospital for the nose, throat, eye and ear, and at the District Nursing Association, Manchester, for orthopedic and goiter cases. Underweight clinics have been held in Derry by Doctor Kerr.

Hot lunches are served during the winter months in nearly all schools. In some schools these lunches are sponsored by the Parent-Teachers' Associations.

DEFECTS CORRECTED

	Found	Corrected
Number of pupils 10 per cent or more underweight	34	10
Number of defective eyes	11	3
Number of skin diseases	7	7
Number of orthopedic cases	3	1
Number of defective tonsils	59	8
Number of defective glands	7	3
Number of communicable diseases:		
Whooping cough	18	18
Chicken pox	2	2
Number of defective ears	7	3

The statistics appended show that the attendance for the year 1928-1929 was less than in the year 1927-1928. This lowering of the percent of attendance is accounted for in a large measure by the epidemic of

whooping cough which prevailed last year in a number of schools for a continued length of time.

I wish again to take this opportunity to express my appreciation of the many and valuable services contributed by the school board in the cause of education and of their hearty cooperation in the work of the schools.

CARL COTTON,

Superintendent of Schools.

Derry, New Hampshire, Feb. 11, 1930.
